

Community-Based Adult Services

support for patients and caregivers

Is your patient at-risk of being admitted to a nursing facility or does your patient's caregiver need a respite option?

Community-Based Adult Services (CBAS) can help. CBAS, also known as Adult Day Health Care, is a licensed medical program that helps adults with physical or mental impairments continue living in their homes and avoid inappropriate institutionalization. CBAS centers are open 5 days a week and offer personalized care in a supportive, safe, and professionally-staffed setting.

How will CBAS benefit your patients and their caregivers?

Studies show that CBAS recipients and their caregivers often report positive outcomes, including*:

- Improved disease management, behavior, and sleep
- Enrichment of the recipient's life
- Reduced social isolation
- Lower levels of caregiving-related stress
- Better psychological well-being of caregivers

What services are provided?

The CBAS center partners with the referring physician, the family/caregiver, and the patient to create a personalized care plan that may include:

- Professional nursing
- Physical, occupational and/or speech therapies
- Mental health services
- Therapeutic activities
- Better psychological well-being of caregivers
- Social services
- Personal care
- A nutritious meal
- Nutritional counseling
- Door-to-door transportation
- Family/caregiver training and support

Which center is right for your patients?

Each CBAS center is unique. To find the right center, SCFHP recommends patients and caregivers arrange a visit. SCFHP contracts with the following CBAS centers:

**Avenidas Rose
Kleiner Center**
Mountain View, CA

**Golden Castle
ADHC**
Palo Alto, CA

**Grace
ADHC**
Santa Clara, CA

**Prestige
ADHC**
Milpitas, CA

**Silicon Valley
ADHC**
Milpitas, CA

To make a referral for CBAS, contact the Santa Clara Family Health Plan CBAS Care Coordinator at 1-408-874-1819.

SCFHP can help you determine if your patient meets the eligibility criteria.
